1. IDENTIFICATION OF THE S Material Name Uses	STANCE/PREPARATION AND COMPANY/UNDERTAK Shell Spirax S2 TQ Transmission oil.	ING
Product Code	001D8243	
Manufacturer/Supplier	Shell India Markets Private Limited 2nd Floor, Campus 4A RMZ Millenia Park 143 Dr. MGR Road, Perungudi CHENNAI 600096 India	
Telephone Fax	(+91) 04443450000 (+91) 04443451516	
Emergency Telephone Number	+91 22 6516 1058	

#### 2. COMPOSITION/INFORMATION ON INGREDIENTS Mixture Description

: Highly refined mineral oils and additives.

#### Hazardous Components

nazaraoao oomp					
Chemical	CAS	EINECS	Symbol(s)	R-phrase(s)	Conc.
Identity					
Zinc alkyl			Xi, N	R36/38;	1.00 - 2.40 %
dithiophosphate				R51/53	
Calcium			Xi	R43	0.10 - 0.50 %
sulphonate					

Additional Information	:	The highly refined mineral oil contains <3% (w/w) DMSO-
		extract, according to IP346. Refer to chapter 16 for full text of
		EC R-phrases.

3. HAZARDS IDENTIFICATION		
EC Classification	:	Not classified as dangerous under EC criteria.
Health Hazards	:	Not expected to be a health hazard when used under normal conditions. Prolonged or repeated skin contact without proper cleaning can clog the pores of the skin resulting in disorders such as oil acne/folliculitis. Used oil may contain harmful impurities.
Signs and Symptoms	:	Oil acne/folliculitis signs and symptoms may include formation of black pustules and spots on the skin of exposed areas. Ingestion may result in nausea, vomiting and/or diarrhoea.
Safety Hazards Environmental Hazards	:	Not classified as flammable but will burn. Not classified as dangerous for the environment.

General Information       :       Not expected to be a health hazard when used under normal conditions.         Inhalation       ::       Not treatment necessary under normal conditions of use. If symptoms persist, obtain medical advice.         Skin Contact       ::       Remove contaminated clothing. Flush exposed area with water and follow by washing with soap if available. If persistent irritation occurs, obtain medical attention.         Eye Contact       ::       Flush eye with copious quantities of water. If persistent irritation occurs, obtain medical attention.         Ingestion       ::       In general no treatment is necessary unless large quantities are swallowed, however, get medical advice.         Advice to Physician       ::       Treat symptoms personnel.         Specific Hazards       ::       Hazardous combustion products may include: A complex mixture of airborne solid and liquid particulates and gases (smoke). Carbon monoxide may be evolved if incomplete combustion occurs. Unidentified organic and inorganic compounds.         Suitable Extinguishing       ::       Foean, water spray or fog. Dry chemical powder, carbon dioxide, sand or earth may be used for small fires only.         Unsuitable Extinguishing       ::       Proper protective equipment including breathing apparatus must be worn when approaching a fire in a confined space.         Accidentry with spilled or released material. For guidance on selection of personal protective equipment see Chapter 8 of this Material Safety Data Sheet. See Chapter 13 for information on disposal. Observe the relevant local and int		
Inhalation       :       No treatment necessary under normal conditions of use. If symptoms persist, obtain medical advice.         Skin Contact       :       Remove contaminated clothing. Flush exposed area with water and follow by washing with scop if available. If persistent irritation occurs, obtain medical attention.         Eye Contact       :       Flush eye with copious quantities of water. If persistent irritation occurs, obtain medical attention.         Ingestion       :       In general no treatment is necessary unless large quantities are swallowed, however, get medical advice.         Advice to Physician       :       Treat symptomatically. <b>:</b> FIRE-FIGHTING MEASURES         Clear fire area of all non-emergency personnel.       Specific Hazards         :       Hazardous combustion products may include: A complex mixture of airborne solid and liquid particulates and gases (smoke). Carbon monoxide may be evolved if incomplete combustion occurs. Unidentified organic and inorganic compounds.         Suitable Extinguishing Media       :       Foram, water spray or fog. Dry chemical powder, carbon divide, sand or earth may be used for small fires only.         Do not use water in a jet.       Proper protective equipment including breathing apparatus must be worn when approaching a fire in a confined space.         Avoid contact with spilled or released material. For guidance on selection of personal protective equipment see Chapter 8 of this Material Safety Data Sheet. See Chapter 13 for information on disposal. Observe the relevant local and international reguil	4. FIRST-AID MEASURES	
Inhalation       :       No treatment necessary under normal conditions of use. If symptoms persist, obtain medical advice.         Skin Contact       :       Remove contaminated clothing. Flush exposed area with water and follow by washing with scap if available. If persistent irritation occurs, obtain medical attention.         Eye Contact       :       Flush eye with copious quantities of water. If persistent irritation occurs, obtain medical attention.         Ingestion       :       In general no treatment is necessary unless large quantities are swallowed, however, get medical advice.         Advice to Physician       :       Treat symptomatically.         Clear fire area of all non-emergency personnel.       Specific Hazards       :         Specific Hazards       :       Hazardous combustion products may include: A complex mixture of airborne soil and liquid particulates and gases (smoke). Carbon monoxide may be evolved if incomplete combustion occurs. Unidentified organic and inorganic compounds.         Suitable Extinguishing       :       Foam, water spray or fog. Dry chemical powder, carbon dioxide, sand or earth may be used for small fires only.         Unsuitable Extinguishing       :       Drot use water in a jet.         Media       :       Proper protective equipment including breathing apparatus must be worn when approaching a fire in a confined space.         Avoid contact with spilled or released material. 		and disposal of this material.
Handling	:	Avoid prolonged or repeated contact with skin. Avoid inhaling
		vapour and/or mists. When handling product in drums, safety
		footwear should be worn and proper handling equipment
		should be used. Properly dispose of any contaminated rags or
		cleaning materials in order to prevent fires.
Storage	:	Keep container tightly closed and in a cool, well-ventilated
		place. Use properly labelled and closeable containers. Store at
		ambient temperature.
Product Transfer	:	This material has the potential to be a static accumulator.
		Proper grounding and bonding procedures should be used
		during all bulk transfer operations.
Recommended Materials	:	For containers or container linings, use mild steel or high
		density polyethylene.
Unsuitable Materials	:	PVC.
Additional Information	:	Polyethylene containers should not be exposed to high
		temperatures because of possible risk of distortion.

#### 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

If the American Conference of Governmental Industrial Hygienists (ACGIH) value is provided on this document, it is provided for information only.

#### **Occupational Exposure Limits**

Material	Source	Туре	ppm	mg/m3	Notation
Oil mist, mineral	ACGIH	TWA(Inhala ble fraction.)		5 mg/m3	
	IN OEL	TWA(Mist.)		5 mg/m3	
	IN OEL	STEL(Mist.)		10 mg/m3	

#### **Biological Exposure Index (BEI)**

No biological limit allocated.

The level of protection and types of controls necessary will vary **Exposure Controls** : depending upon potential exposure conditions. Select controls based on a risk assessment of local circumstances. Appropriate measures include: Adequate ventilation to control airborne concentrations. Where material is heated, sprayed or mist formed, there is greater potential for airborne concentrations to be generated. Define procedures for safe handling and maintenance of controls. Educate and train workers in the hazards and control measures relevant to normal activities associated with this product. Ensure appropriate selection, testing and maintenance of equipment used to control exposure, e.g. personal protective equipment, local exhaust ventilation. Drain down system prior to equipment break-in or maintenance.

Personal Protective Equipment	:	Retain drain downs in sealed storage pending disposal or for subsequent recycle. Always observe good personal hygiene measures, such as washing hands after handling the material and before eating, drinking, and/or smoking. Routinely wash work clothing and protective equipment to remove contaminants. Discard contaminated clothing and footwear that cannot be cleaned. Practice good housekeeping. Personal protective equipment (PPE) should meet recommended national standards. Check with PPE suppliers.
Respiratory Protection	:	No respiratory protection is ordinarily required under normal conditions of use. In accordance with good industrial hygiene practices, precautions should be taken to avoid breathing of material. If engineering controls do not maintain airborne concentrations to a level which is adequate to protect worker health, select respiratory protection equipment suitable for the specific conditions of use and meeting relevant legislation. Check with respiratory protective equipment suppliers. Where air-filtering respirators are suitable, select an appropriate combination of mask and filter. Select a filter suitable for combined particulate/organic gases and vapours [boiling point >65°C(149 °F)].
Hand Protection	:	Where hand contact with the product may occur the use of gloves approved to relevant standards (e.g. Europe: EN374, US: F739) made from the following materials may provide suitable chemical protection: PVC, neoprene or nitrile rubber gloves. Suitability and durability of a glove is dependent on usage, e.g. frequency and duration of contact, chemical resistance of glove material, dexterity. Always seek advice from glove suppliers. Contaminated gloves should be replaced. Personal hygiene is a key element of effective hand care. Gloves must only be worn on clean hands. After using gloves, hands should be washed and dried thoroughly. Application of a non-perfumed moisturizer is recommended. For continuous contact we recommend gloves with breakthrough time of more than 240 minutes with preference for > 480 minutes where suitable gloves can be identified. For short-term/splash protection we recommend the same, but recognise that suitable gloves offering this level of protection may not be available and in this case a lower breakthrough time may be acceptable so long as appropriate maintenance and replacement regimes are followed. Glove thickness is not a good predictor of glove resistance to a chemical as it is dependent on the exact composition of the glove material. Glove thickness should be typically greater than 0.35 mm depending on the glove make and model.
Eye Protection	:	Wear safety glasses or full face shield if splashes are likely to occur.
Protective Clothing	:	Skin protection not ordinarily required beyond standard issue work clothes.
Monitoring Methods	:	Monitoring of the concentration of substances in the breathing zone of workers or in the general workplace may be required to confirm compliance with an OEL and adequacy of exposure

	controls. For some substances biological monitoring may also be appropriate. Validated exposure measurement methods should be applied by a competent person and samples analysed by an accredited laboratory. Examples of sources of recommended exposure measurement methods are given below or contact the supplier. Further national methods may be available.
	National Institute of Occupational Safety and Health (NIOSH), USA: Manual of Analytical Methods http://www.cdc.gov/niosh/ Occupational Safety and Health Administration (OSHA), USA: Sampling and Analytical Methods http://www.osha.gov/ Health and Safety Executive (HSE), UK: Methods for the Determination of Hazardous Substances http://www.hse.gov.uk/ Institut für Arbeitsschutz Deutschen Gesetzlichen Unfallversicherung (IFA), Germany. http://www.dguv.de/inhalt/index.jsp L'Institut National de Recherche et de Securité, (INRS), France http://www.inrs.fr/accueil
Environmental Exposure Controls	: Take appropriate measures to fulfil the requirements of relevant environmental protection legislation. Avoid contamination of the environment by following advice given in Chapter 6. If necessary, prevent undissolved material from being discharged to waste water. Waste water should be treated in a municipal or industrial waste water treatment plant before discharge to surface water. Local guidelines on emission limits for volatile substances must be observed for the discharge of exhaust air containing vapour.

# 9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance		Amber. Liquid.
Odour	:	Slight hydrocarbon.
рН	:	Not applicable.
Initial Boiling Point and	:	> 280 °C / 536 °F estimated value(s)
Boiling Range		
Pour point	:	Typical -30 °C / -22 °F
Flash point	:	230 °C / 446 °F (COC)
Upper / lower Flammability	:	Typical 1 - 10 %(V) (based on mineral oil)
or Explosion limits		
Auto-ignition temperature	:	> 320 °C / 608 °F
Vapour pressure		< 0.5 Pa at 20 °C / 68 °F (estimated value(s))
Specific gravity	:	Typical 0.885 at 15 °C / 59 °F
Density		Typical 885 kg/m3 at 15 °C / 59 °F
Water solubility		Negligible.
Solubility in other solvents		Data not available
n-octanol/water partition		> 6 (based on information on similar products)
coefficient (log Pow)		
Dynamic viscosity	÷	Data not available
Kinematic viscosity	:	Typical 90.5 mm2/s at 40 °C / 104 °F
Vapour density (air=1)		
		This material is not expected to be a static accumulator.
Evaporation rate (nBuAc=1)		•
	•	

0. STABILITY AND REACTIVI Stability	ΓY	Stable.
Conditions to Avoid		Extremes of temperature and direct sunlight.
Materials to Avoid	:	Strong oxidising agents.
Hazardous	:	Hazardous decomposition products are not expected to form
Decomposition Products	•	during normal storage.
Decomposition reducts		
1. TOXICOLOGICAL INFORM	ΑΤΙ	ON
Basis for Assessment	:	Information given is based on data on the components and the toxicology of similar products.
		Unless indicated otherwise, the data presented is
		representative of the product as a whole, rather than for individual component(s).
Acute Oral Toxicity		Expected to be of low toxicity: LD50 > 5000 mg/kg , Rat
Acute Dermal Toxicity	:	Expected to be of low toxicity: LD50 > 5000 mg/kg , Rabbit
Acute Inhalation Toxicity	:	Not considered to be an inhalation hazard under normal
Addition managements	•	conditions of use.
Skin Irritation	:	Expected to be slightly irritating. Prolonged or repeated skin
		contact without proper cleaning can clog the pores of the skin
<b>—</b> • • • •		resulting in disorders such as oil acne/folliculitis.
Eye Irritation	:	Expected to be slightly irritating.
Respiratory Irritation	:	Inhalation of vapours or mists may cause irritation.
Sensitisation	:	Not expected to be a skin sensitiser.
Repeated Dose Toxicity	:	Not expected to be a hazard.
Mutagenicity	:	Not considered a mutagenic hazard.
Carcinogenicity	:	Not expected to be carcinogenic. Product contains mineral oils
		of types shown to be non-carcinogenic in animal skin-painting
		studies. Highly refined mineral oils are not classified as
		carcinogenic by the International Agency for Research on
		Cancer (IARC).
Material	:	Carcinogenicity Classification
Highly refined mineral oil	:	ACGIH Group A4: Not classifiable as a human carcinogen.
(IP346 <3%)		
Highly refined mineral oil	:	IARC 3: Not classifiable as to carcinogenicity to humans.

(IP346 <3%)		
Highly refined mineral oil	:	IARC 3: Not classifiable as to carcinogenicity to humans.
(IP346 <3%)		
Highly refined mineral oil	:	GHS / CLP: No carcinogenicity classification
(IP346 <3%)		

Reproductive and
<b>Developmental Toxicity</b>
Additional Information

: Not expected to be a hazard.

: Used oils may contain harmful impurities that have accumulated during use. The concentration of such impurities will depend on use and they may present risks to health and the environment on disposal. ALL used oil should be handled with caution and skin contact avoided as far as possible.

# 12. ECOLOGICAL INFORMATION Ecotoxicological data have not been determined specifically for this product. Information given is based on a knowledge of the components and the ecotoxicology of similar products. Unless indicated otherwise, the data presented is representative of the product as a whole, rather than for individual component(s). Acute Toxicity Ecotoxicology of similar products are physical fouling of aquatic products.

	organisms. Expected to be practically non toxic: LL/EL/IL50 > 100 mg/l (to aquatic organisms) LL/EL50 expressed as the nominal amount of product required to prepare aqueous test extract. Mineral oil is not expected to cause any chronic effects to aquatic organisms at concentrations less than 1 mg/l.
Microorganisms	: Data not available
Mobility	: Liquid under most environmental conditions. If it enters soil, it will adsorb to soil particles and will not be mobile. Floats on water.
Persistence/degradability	: Expected to be not readily biodegradable. Major constituents are expected to be inherently biodegradable, but the product contains components that may persist in the environment.
Bioaccumulation	: Contains components with the potential to bioaccumulate.
Other Adverse Effects	Product is a mixture of non-volatile components, which are not expected to be released to air in any significant quantities. Not expected to have ozone depletion potential, photochemical ozone creation potential or global warming potential.
13. DISPOSAL CONSIDERATIO Material Disposal	<ul> <li>Recover or recycle if possible. It is the responsibility of the waste generator to determine the toxicity and physical properties of the material generated to determine the proper waste classification and disposal methods in compliance with applicable regulations. Do not dispose into the environment, in drains or in water courses.</li> </ul>
Container Disposal	: Dispose in accordance with prevailing regulations, preferably to a recognised collector or contractor. The competence of the collector or contractor should be established beforehand.
Local Legislation	<ul> <li>Disposal should be in accordance with applicable regional, national, and local laws and regulations.</li> </ul>

#### 14. TRANSPORT INFORMATION

#### Land (as per ADR classification): Not regulated

This material is not classified as dangerous under ADR regulations.

#### IMDG

This material is not classified as dangerous under IMDG regulations.

#### IATA (Country variations may apply)

This material is either not classified as dangerous under IATA regulations or needs to follow country specific requirements.

Additional Information : MARPOL Annex 1 rules apply for bulk shipments by sea.

#### **15. REGULATORY INFORMATION**

The regulatory information is not intended to be comprehensive. Other regulations may apply to this material.

EC Classification EC Symbols EC Risk Phrases EC Safety Phrases Chemical Inventory Status	: : : :	Not classified as dangerous under EC criteria. No Hazard Symbol required Not classified. Not classified.
EINECS	:	All components listed or polymer exempt.
TSCA	:	Not established.
Sensitiser not sufficient to classify	:	Contains calcium sulphonate. May produce an allergic reaction.
Other Information	:	The Manufacture, Storage and Import of Hazardous Chemicals Rules 1989 (amended version issued 2000). The Factories Act, 1948, The Second Schedule: Permissible levels of certain chemical substances in work environment, as amended through 1987. India Central motor Vehicles (Amendment) Rules 1993.

## **16. OTHER INFORMATION**

R-phrase(s)

R36/38 R43 R51/53	Not classified. Irritating to eyes and skin. May cause sensitisation by skin contact. Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.
